Dodge

Washington

Saunders

Updated November 25, 2020

The main factors considered in the risk dials include:

- The increase in the number of COVID-19 cases over the past three weeks.
- The increase in the percentage of positive COVID-19 tests.
- The capacity of the district and local healthcare system including the number of patients hospitalized with COVID-19, the ventilators being utilized and the percentage available of adult ICU beds.
- The presence of community clusters and or community spread.
- The availability of 3RPHD to trace all identified contacts of positive cases in 48 hours.

This week the 3RPHD jurisdiction increased to 3.43 due to an increase in the number of cases, increase in community spread, increase in usage of ventilators, decrease in ICU bed availability and an increase in regional hospitalizations due to COVID-19. “Our total case count is 4,975 cases, during the past seven days we had 584 new cases and during the last 14 days we have had 1,223 new cases.” said Terra Uhing, Executive Director of Three Rivers Public Health Department. Please avoid the 3 C’s—Crowded Places, Confined Spaces and Close Contact.

As a reminder 3RPHD updates the community risk dials each Wednesday, and the 3RPHD Data Dashboard is updated each weekday. Please visit our website to learn more.

For questions or more information about COVID-19, please call Three Rivers at 402-727-5396, email info@3rphd.org or visit www.threeriverspublichealth.org
